CHAPTER-1

INTRODUCTION

1.1 Introduction

Rentomatic is like a special website that brings together many dress choices, making it easy for you to find, compare, and rent dresses all in one spot. We know there are lots of places to rent dresses online, so we made Rentomatic to make it all simple and stylish. Imagine saying goodbye to clicking around different websites to find your dream dress – with Rentomatic, you get it with just one click. It's like your personal shortcut to the best dresses out there! Our website is really easy to use. You can look through different styles, sizes, and see how renting works, all with a few clicks. Rentomatic isn't just a website; it's like a special place where everything is made to be easy and fun. Come join us on this cool journey where finding and renting the perfect dress is not a problem but a happy experience. Welcome to Rentomatic – your new friend for all things dresses!

1.2 Motivation

The motivation behind creating a rental website is to provide a platform where people can easily find, list, and rent various types of properties or items. It simplifies the process of connecting renters with property owners, making it convenient for both parties to engage in transactions. It offers a centralized place for users to search, compare, and make informed decisions, ultimately saving time and effort. It can generate revenue through listing fees or commissions, making it a potentially profitable venture.

1.3 Objectives

1. All-in-One Hub: Make a website that brings together lots of places to rent dresses. It's like a super convenient store for all your dress rental needs.
2. Easy Search: Help users quickly find dresses they like by letting them easily search and compare outfits from different rental websites.
3. Lots of Choices: Gather dresses from many rental sites so users have a big selection. Different styles, sizes, and designers all in one place.

4. Simple User Accounts: Make things easy for users by letting them have one account for everything. They can manage their profile, preferences, and see their rental history without jumping between different websites.

5. Reviews and Ratings: Let people share their thoughts and ratings about dresses and rental sites. This builds trust among users, helping them make better decisions.

1.4 Expected Outcome

The website makes it simple for users to find and rent dresses from lots of places at once, saving them time. The website is easy to use. Users have one account for everything and can easily search for the perfect dress without any hassle. Users get to pick from a bunch of different dresses, giving them lots of options and styles to choose from. Users can see exactly how much renting a dress will cost, helping them decide what fits their budget and preferences. All the dresses meet high standards, and users can see what others think through reviews. This way, they know they're getting good-quality outfits.

CHAPTER-2

BACKGROUND

2.1 Introduction

A rental website is an online platform that facilitates the process of renting various types of items, properties, or services. It serves as a marketplace where users can list items they want to rent out and where potential renters can search for and rent those items for a specified period. Rental websites often include features such as search filters, booking calendars, secure payment systems, and user reviews to ensure a smooth rental experience for both parties involved. They can cover a wide range of categories, from vacation rentals and event spaces to tools, equipment, and even clothing.

2.2 Related Works

The main features of this website are products, suggestions, about ,reviews, service , contact.

Products Page:

- Showcase a catalog of available rental items or services.
- Include clear and detailed product/service descriptions..

Suggestion Page:

- Offer suggestions or recommendations based on user preferences or browsing history.
- Encourage exploration of related or complementary rental options.

About Page:

- Share information about our company, mission, and values.
- Introduce the team and highlight key personnel.

Review page:

- Display customer reviews and testimonials.
- Highlight positive feedback to build trust among potential renters.

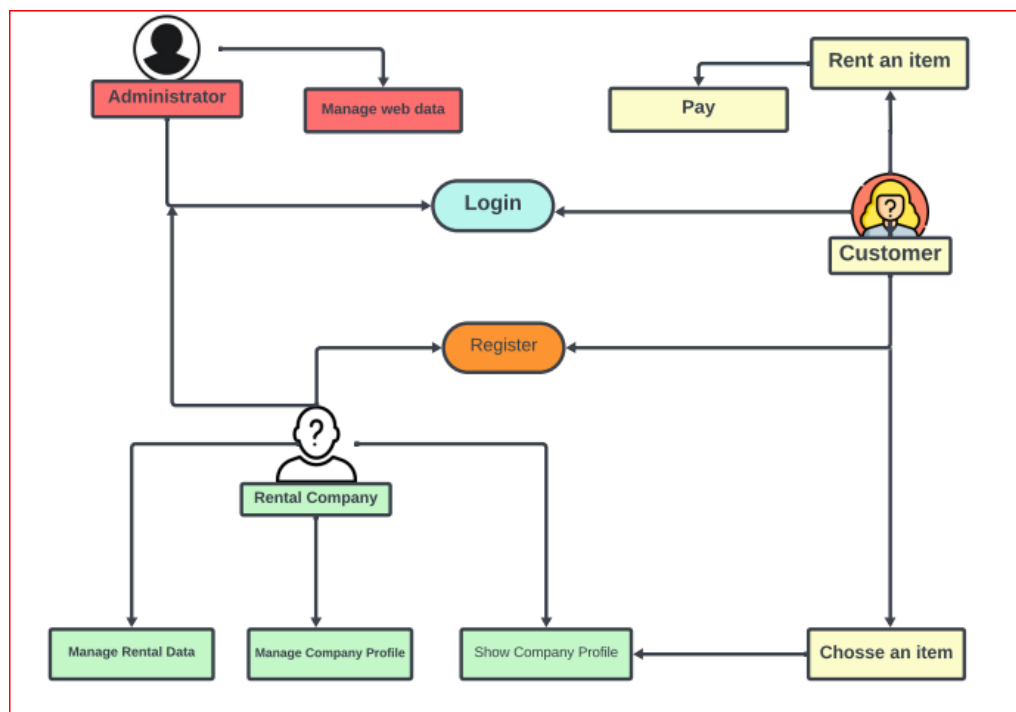

Service Page:

- Detail the types of services or rental categories you offer.
- Include information on pricing, terms, and any special features.
- Highlight any unique aspects or benefits of your rental services.

Contact Page:

- We Provide multiple channels for users to get in touch (e.g., email, phone, contact form).
- We Provide a map or directions if you have a physical location.

2.3 Model

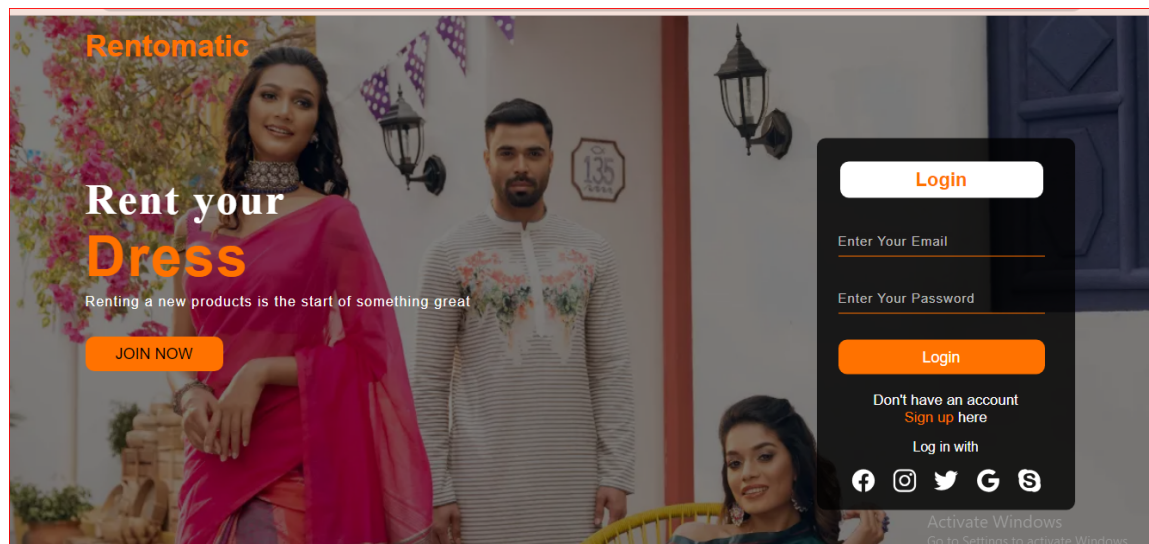

DESIGN SPECIFICATION

Front-end Design

Front-end-design is like a manual book which guides us how a website looks and how you can use it . It includes all the things like button's position, which colors are used, text style etc. Besides, a good front-end design makes the application easy and fun for the tourists to use the website. It also makes sure the website looks good on phones, tablets, and computers. To construct this kind of design uses special codes like HTML, CSS, and JavaScript to make the pages on the website move and change when a user clicks on those things. When a website's look is good and easy to use, it encourages the people to explore and see what's inside. So we can say that front-end design plays a crucial role in shaping the user experience of a website. For this reason we try our best to construct a user-friendly design for our tourist website.

3.1.7Contact

This is the contact section of our website. Where a user can contact with us.

3.1.8 Implementation Requirements

To create a website requires a complex process with many steps. Firstly , we have to plan the website's layout and functionality. Besides, we determine the goal and purpose of this website. We try to create a user-friendly interface that allows visitors to easily navigate and find the information they need. We also added an user-friendly booking system.

CHAPTER-5 DISCUSSION AND

CONCLUSION

4.1 Discussion and Conclusion

We tried our best to finish the website by developing every page using HTML, CSS, and JavaScript etc. Although comparatively , we are using less javascript but we are trying to update our site day by day. We tried our best to create a user-friendly platform which ensures the people's best services. So we added all the necessary features which are service, destination, booking etc. As the users of our web site can be benefited when they need it.
